Creative customised ideas
for individual needs

Dan.Sig

Wayfinders manufactured in lacquered aluminium with built-in LED lighting. Shop lists and layout maps are digitally printed, so they can be changed and updated quickly, simply and inexpensively.

Copenhagen Zoo.
Hardened, laminated glass mounted onto wood using stainless steel fittings.
Reversed graphics printed on the back. Milled lettering in heat-galvanised steel.

DanSign's consultants and design team produce creative customised solutions for special contexts and environments which meet individual requirements and specifications. DanSign enjoys the challenge of creating new, untested solutions.

Texts and logos are milled in such materials as brass, copper, granite, brushed steel and aluminium. Glass can be cut to measure and used as an assignment element or as an actual sign plate. Glass is mounted using steel finish screws, which form an integral part of the design.

Acrylic is cut to measure, designed and shaped in our acrylic workshop into 3D designs or as a sign onto which graphics are printed, serigraphy printed or mounted using self-adhesive film.

Specially designed stands, monoliths and other design elements are produced in our forge and can be fitted with low-consumption LEDs or neon tubes in a full range of colours.

Specially designed sign stands manufactured in lacquered steel. The sign face is made of lacquered aluminium with screen printed texts sealed with clear varnish. The sign stands have been installed in Danish palaces and palace parks.
